

INDUCON® is used as a friction coating for friction dampers. Due to the exactly controllable hardness of the material, the frictional force of the damper can be adjusted in a wide range. The narrow thickness and weight tolerances of the material enable a narrow tolerance range of the finished product and optimum use of material.

✓ PRODUCTS USED

INDUCON® compressed foam

- ether-based mixed cell:
INDUCON® T350, T400, T500, T550

✓ IMPORTANT PRODUCT CHARACTERISTICS

- adjustable hardness
- high temperature resistance
- good storage capacity for lubricants
- long service life
- very good stamping properties/cost-effective fabrication

✓ EXISTING APPLICATIONS

- washing machine shock absorbers
