

Acoustically effective special foam materials are used in vehicle manufacture and mechanical engineering for airborne sound absorption. Materials and surfaces define the sound absorption in various frequency ranges and fulfil further requirements.

✓ CONTROLLABLE PROPERTIES

- degree of sound absorption
- thickness
- density
- surface quality: e.g. water-, diesel- or oil-resistant
- colour
- flammability

✓ OPTIONS

Self-adhesive finish

✓ AREAS OF APPLICATION

Sound insulation of vehicles

- agriculture machinery
- construction machines
- special vehicles
- motor caravans
- small and special series motor vehicles

Sound insulation of machines

- woodworking machines
- noise protection covers
- machine tools
- special machines

Sound insulation of equipment and systems

- loudspeakers
- electronic devices
- ventilation and air-conditioning units
- noise protection covers
