

INDUSKIN as a 2D stamped part of open cell PU-ether foam functions as a base material for seat heating systems in climatized seats. In the embossing process, the base material is provided with the required seat contour (seat piping). Use of filter foam enables optimum ventilation and aeration of the heated leather seats.

## ✓ PRODUCTS USED

### **INDUSKIN embossed**

- ether-based mixed cell: INDUCON® T PPI embossed

## ✓ IMPORTANT PRODUCT CHARACTERISTICS

- embossing contours
- good permeability to air

## ✓ EXISTING APPLICATIONS

- Carrier for seat heating
